SUMMARY

Software Engineer with 5+ years of experience building scalable banking systems, APIs, migration solutions, and developer platforms.

SKILLS SUMMARY

- **Languages:** Python, C#, TypeScript, SQL, Go, Java
- **Frameworks & Tools:** .NET Core, Vue.js, Git, Postman, Docker, Claude, Codex
- **Databases:** MongoDB, SQL Server, Redis
- **Cloud:** AWS EC2, Lambda, S3, CloudWatch, IAM
- **Core Concepts:** OOP, SOLID, Design Patterns, System Design, REST APIs, Data Structures & Algorithms, Microservices, Asynchronous Programming

EXPERIENCE

- **Q2 Software (MFIFLEX Technologies Pvt Ltd)** Bengaluru
Intermediate Software Engineer (SDE 2) September 2023 - Present
 - Led a one-year modernization initiative to migrate **30+ legacy Core Banking and SSO adapter applications from .NET to Go**, improving platform scalability, maintainability, and long-term modernization readiness.
 - Designed and developed secure Core Banking and SSO adapter solutions to integrate **FIS Core Banking with the Q2 Digital Banking Platform**, improving transaction reliability, system scalability, and integration stability.
 - Addressed lengthy financial institution onboarding by developing an internal developer platform that reduced implementation effort from **250+ hours to under 50 hours—an 80% improvement in onboarding efficiency**.
 - Streamlined FI-specific Money Movement configuration by developing an automation tool that **reduced configuration time from 20+ hours to 5 hours, delivering a 75% reduction in implementation effort**.
 - Accelerated engineer on-boarding and strengthened team productivity by mentoring developers through technical design discussions, code reviews, and knowledge-sharing sessions.
 - Supported reliable Agile delivery through sprint planning, peer code reviews, production releases, and resolution of critical on-call incidents while maintaining compliance with SDLC best practices.

Tech: Python, .NET, Vue.js, Typescript, Go, SQL Server

- **Tech Mahindra** Bengaluru
Software Engineer August 2021 - September 2023
 - Modernized a legacy .NET Framework 4.8 MVC application by migrating it to .NET Core 6 MVC, resulting in a **30% performance improvement**.
 - Created **CanvasJS** based dashboards to deliver clear data visualizations and improve decision-making for users.
 - Developed RESTful Web APIs to enable seamless data sharing and integration with internal systems.
 - Implemented N-Tier architecture with the **Repository pattern** to improve code maintainability, scalability, and separation of concerns.
 - Guided and onboarded new developers by providing technical support, code walkthroughs, and development best practices.

Tech: C#, .NET Core 6, .NET Framework 4.8, jQuery, CSS, HTML

- **Raitha Agrogator Pvt Ltd** Bengaluru
Software Engineer December 2020 - August 2021
 - Developed and deployed **RESTful APIs** using Java, JDBC, MySQL, and AWS to support scalable backend services.
 - Improved application stability and performance, resulting in fewer crashes and faster response times.
 - Ensured smooth integration between backend APIs, database layers, and cloud deployment environments.

Tech: Java, Android, AWS

EDUCATION

- **K S School Of Engineering and Management (VTU)** Bengaluru
Bachelor of Engineering - Electrical & Electronics; CGPA: 6.82 August 2016 - August 2020

PROJECTS

- **Q2 Skill Share:** Created an internal, centralized, and secure marketplace that enables developers to discover, verify, share, review, and install reusable AI skills. It eliminates manual repository searches, reduces unsafe or inconsistent installations, ensures version traceability, and enables teams to adopt approved workflows with a single command.

ACHIEVEMENT

- **Q2 Orbit Hackathon 2026 - 2nd Place:** Built a Money Movement configuration platform reducing implementation effort from 25+ hours to 5 hours per FI, **achieving a 75% reduction in configuration effort.**
- **Q2 India Hackathon 2024 - 2nd Runner Up:** Built a human-like AI voice assistant using OpenAI models, ElevenLabs TTS, and LangChain to replace traditional IVR-based banking support, integrate multiple microservices, deliver real-time banking information, and **reduce customer support queries by 30%.**
